

DFR Design System: Product Look & Feel

BACKGROUND

Our goal is to increase consistency and decrease design and development time. Currently, the word document for UI specs is hard to utilize and can easily become outdated due to it not being linked directly to designs.

PROPOSAL

Our proposal is building an Internal Design System utilizing Figma. This design system will be maintained by the design team and utilized to create designs that will then be linked to development resources.

OUTCOMES

The design system will increase efficiency, provide a standard look & feel, and ensure accessibility across DFR applications.
